

# Ion Chromatography Standards & Consumables

Ion Chromatography (IC) is a critical tool for the analysis of ions in samples across a range of applications including water analysis and food and beverage testing. AnalytiChem offers a complete IC standard and consumable solution, helping you to maximize your instrument sensitivity and accuracy during analysis.

## IC Calibration Standards

Our IC standards are manufactured under our ISO 17034 scope of accreditation and can be used for calibration, QC checks, or performance evaluation during your routine analysis. With more than 10 anions and 20 cations available in our portfolio we are prepared to support your needs.

## Eluents

We manufacture eluents as concentrates and as working solutions enabling you to find the solution that best fits your lab requirements. High-quality eluents mean less baseline variation in your analysis.

## Sample Vials

Equipped with a pierce cap and compatible with common autoloaders, these ~7 ml sample vials will readily integrate with your lab routine.
